

IMMERSIONSUIT OVERALL | V20 OP ECO |

Made out of 5.5 mm synthetic rubber covered by heavy duty Nylon/polyester material in a bright visible color. Suit has a high buoyancy also without a lifejacket. The suit is easy to done in under 2 minutes and fulfills all requirements of SOLAS for a 6 hours immersion suit. Emergency light fixture on breast (light optional).

All suit seams are 3 times glued and sewn. After production the suit is separately tested with 3 times of the required pressure test value to guarantee that the seams are also watertight after long time use or storage. Suit is equipped with fixed 3 finger gloves to prevent any water ingress. As standard with all aquata suits the zipper is made by Dynat Germany to guarantee a long life and water tightness even under heavy conditions. Easy to open and close it gives you the best and perfect closure without heavy force like with other cheap standard zippers. For ships where lifejackets are stored near to the immersion suits we offer the model V20 OP Eco. This suit must be used with an additional lifejacket.

It is highly recommended to check the combination suit and lifejacket, as some older jackets may not fit to survival suits. By this reason for an easy use in emergency we recommend the model V20 Eco.
