

XS50

TESTKIT · PRESSURE LEAK TEST

Efficient testing through air pressure. The aquata TestKit enables precise monitoring and control of diving and survival suits for leaks. Air pressure is generated inside the suit, making potential weak points immediately detectable, while the integrated pressure gauge allows accurate monitoring throughout the test.

XS50

TECHNICAL DATA

ART. NO.	XS50
FUNCTION	Leak test by internal air pressure
SUITABLE FOR	Immersion suits, drysuits, diving and survival suits
INSTRUMENT	Pressure gauge for accurate monitoring
COMPONENTS	Air hose set and fittings
CASE	Aluminium carrying case
USERS	Service stations, operators, rescue organisations

KEY FEATURES

- **Precise:** Weak points become immediately detectable.
- **Controlled:** Pressure monitored throughout the testing process.
- **Reliable:** Thorough, repeatable results for periodic inspection.
- **Portable:** Complete kit in a robust aluminium case.
